Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Trust aim & characteristics

The Trust's objective is to provide an above average level of income and income growth together with long term growth of capital through a policy of investing mainly in higher yielding UK FTSE 100 companies.

†† Merchants seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Manager's review

In April the stockmarket rebounded sharply after a poor first quarter, helped by an interest rate cut by the Bank of England. The market was driven by low-yielding mining shares as well as oil companies as commodity prices rose. Rights issues and dividend cuts from Royal Bank of Scotland and HBOS were also important events.

At a Trust level performance lagged the market, impacted by a low exposure to mining shares. Also holdings in HBOS and Bradford & Bingley were impacted by the industry issues. On the positive side a bid for FKI boosted the Trust along with underweight positions in Lloyds TSB and Unilever which lagged the market rally.

The credit crunch is continuing to impact consumers and companies although valuations of the most exposed companies are relatively low and price in much of the anticipated deterioration in trading. We continue to favour robust companies with reasonable growth prospects, but we are also actively looking for out of favour opportunities.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested. This investment trust charges 65% of its annual management fee to the capital account and 35% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result. Your capital could also decrease if income paid out of capital exceeds the growth rate of the trust.

History

The Trust was incorporated in February 1889, making it the oldest of the investment trusts in the Allianz Global Investors stable. Initially it principally invested in the fixed interest securities of railway companies in the USA, Canada and South America, with the remainder held in Government securities and companies such as Castlemain Brewery in New South Wales. The Trust now concentrates primarily upon major UK companies with an above average rate of dividend yield.

On 30th June 2006 a further 1,655,941 Ordinary shares were issued following the reconstruction and planned winding up of Allianz Dresdner Income Growth Investment Trust plc. The increase in assets was achieved at no cost to existing shareholders.

Launch Date: 1889 **Wind-up Date:** None

Share buybacks

1,171,413 shares have been repurchased for cancellation to date.
