

## Aim

The Trust's objective is to provide an above average level of income, income growth and long-term growth of capital through a policy of investing mainly in higher yielding UK FTSE 100 companies.

## Risks & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

Merchants seeks to enhance returns for its shareholders through gearing, in the form of long-term, fixed rate debentures. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments lose value. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss. Derivatives are used to manage the trust efficiently.

## History

The Trust was incorporated in February 1889, making it the oldest of the investment trusts in the RCM stable. Initially it principally invested in the fixed interest securities of railway companies in the USA, Canada and South America, with the remainder held in Government securities and companies such as Castlemaine Brewery in Western Australia. The Trust now concentrates primarily upon major UK companies with an above average rate of dividend yield.

## Fund Manager's Review

Simon Gergel

Although the FTSE All Share was broadly flat in August, the tone of the market was risk averse with healthcare, telecoms and utilities amongst the best performers. The UK was also more resilient than the other global markets with the US market off nearly 5%. The 10 year Gilt finished the month yielding less than 3% as investors began to fret about a 'double dip' recession. Although the US Federal Reserve meeting minutes highlighted the risks to growth we continue to see a period of modest economic growth as more likely than a relapse into global recession.

Performance of the Trust's NAV (-0.36% capital only) was slightly ahead of the FTSE 100 Index (-0.62%). The key positives were strong share price moves in some of the largest holdings in the portfolio, such as GlaxoSmithKline, National Grid and Aviva. The biggest negative factors were the weak aerospace and defence stocks BAE Systems and Meggitt and not owning Tesco which outperformed. During the month we bought shares in the recruitment company Hays. Whilst we do not expect a rapid recovery in the depressed core UK business, it offers potential over time, and the overseas operations have structural growth opportunities as the temporary recruitment model gains acceptance. We sold International Power where the shares have been rerated on the announcement of a merger with GDF Suez and we see less value in the GDF controlled quoted vehicle going forward. The UK equity market is reasonably valued, especially in relation to the bond market. Our strategy is to continue to favour high yielding companies that can perform well in a period of modest economic growth.

<sup>2</sup>Source: Datastream as at 31.08.10. Calculated using the latest full year dividend divided by the current share price.

<sup>3</sup>A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are now shown to take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount. It is the capital NAV that is shown, which excludes any income.

Benchmark: FTSE 100 Index

Standardised past performance figures comply with the Financial Services Authority's regulations to enable investors to compare different products from different providers.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.

This investment trust charges 65% of its annual management fee to the capital account and 35% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result. Your capital could also decrease if income paid out of capital exceeds the growth rate of the trust.

## RCM Advantage

RCM and its predecessors have been managing investment trusts since 1889, providing investors with access to investment markets around the world through professionally managed portfolios. Each trust benefits from the expertise of the RCM fund managers yet, as a company listed on the London Stock Exchange, it is independent and is overseen by its own Board of Directors.

RCM is the global equity specialist within Allianz Global Investors. With offices strategically located in the US, Europe and Asia, RCM uses its global research platform to search out investment opportunities.
