Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are now shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Please also refer to Trust Aim & Characteristics, above right.

Trust aim & characteristics

The Trust's objective is to provide an above average level of income and income growth together with long term growth of capital through a policy of investing mainly in higher yielding UK FTSE 100 companies.

††Merchants seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Manager's Review

After a prolonged period of calm financial markets were volatile in May, with those areas that had risen the most, such as emerging markets and commodities, retracing the furthest. Overall the FTSE 100 index fell 4.5%.

The worst performing stocks in the portfolio were those with exposure to US and UK consumer spending, such as Tomkins, GKN and Wimpey. Strong performers included BT on encouraging results, Resolution on acquisition hopes, and DSG International (formerly Dixons) which reported strong results and good sales of flat screen TVs.

Looking forward the economic outlook remains broadly positive though the risks of either slowing growth or rising inflation have increased. The UK market remains modestly valued with many companies offering strong cash flows and attractive, rising yields.

Please remember that past performance is not a guide to future performance. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested. This investment trust charges 65% of its annual management fee to the capital account and 35% to revenue. This could lead to a higher level of income but a lower capital return.

History

The Trust was incorporated in February 1889, making it the oldest of the investment trusts in the Allianz Global Investors stable. Initially it principally invested in the fixed interest securities of railway companies in the USA, Canada and South America, with the remainder held in Government securities and companies such as Castlemain Brewery in New South Wales. The Trust now concentrates primarily upon major UK companies with an above average rate of dividend yield.

Launch Date: 1889 **Wind-up Date:** None
