Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Trust aim & characteristics

The Trust's objective is to provide an above average level of income and income growth together with long term growth of capital through a policy of investing mainly in higher yielding UK FTSE 100 companies.

^{††} Merchants seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Manager's Review

Despite the first interest rate increase for a year, the UK made modest progress, led by mid sized companies. The Trust's performance was helped by the holdings in Premier Foods, BT and GKN which rallied, partially offset by Lonmin and Royal Dutch, both of which underperformed. The UK economic outlook appears relatively robust, though not without risks, whilst the equity market looks modestly valued. The outlook for dividend growth remains healthy, and we continue to favour the largest companies and selected cyclical and higher-growth companies within the higher-yield universe.

Please remember that past performance is not a guide to future performance. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested. This investment trust charges 65% of its annual management fee to the capital account and 35% to revenue. This could lead to a higher level of income but a lower capital return.

History

The Trust was incorporated in February 1889, making it the oldest of the investment trusts in the Allianz Global Investors stable. Initially it principally invested in the fixed interest securities of railway companies in the USA, Canada and South America, with the remainder held in Government securities and companies such as Castlemain Brewery in New South Wales. The Trust now concentrates primarily upon major UK companies with an above average rate of dividend yield.

On 30th June 2006 a further 1,655,941 Ordinary shares were issued following the reconstruction and planned winding up of Allianz Dresdner Income Growth Investment Trust plc. The increase in assets was achieved at no cost to existing shareholders.

Launch Date: 1889 **Wind-up Date:** None

Share buybacks

230,000 shares have been repurchased for cancellation to date.
